

AWS Data Engineering Curriculum Roadmap

1 Cloud & AWS Foundations

Description: Master cloud computing basics, serverless architecture, and essential AWS services.

aws

2 Core AWS Data Storage

Description: Learn securedata storage using Amazon S3 and manage access with IAM roles.

APACHE
Spark

3 Spark Fundamentals

Description: Understand Spark architecture, RDDs, DataFrames, and essential PySpark transformations.

4 AWS Glue ETL Pipelines

Description: Build robust ETL jobs with AWS Glue, Data Catalog, and Glue Workflows.

5 Data Lakehouse & Iceberg

Description: Explore the Lakehouse architecture and leverage Apache Iceberg for scalable data lakes.

6 AWS Automation & Orchestration

Description: Automate your data workflows using AWS Lambda, EventBridge, and Step Functions.

7 Advanced Spark & Optimization

Description: Dive into Spark internals, optimization techniques, and advanced concepts for performance.

8 Cloud Data Warehousing

Description: Master Snowflake for data warehousing, including ingestion, staging, and advanced features.

9 Real-World Project Implementation

Description: Apply your skills through end-to-end ETL, event-driven, and streaming pipeline projects.

10 Architecture & Best Practices

Description: Implement Medallion Architecture, SCDs, and integrate Git for version control.
